AHMED OMAR BABLAIL | 441105970

Introduction

In this project, we develop a System called mini Tawakkalna; that keeps the records of the people who are taking the vaccines , as well as knowing the vaccination status for each person by using the person's ID. Our goal in this project is to know the immunization status of each person and facilitate the process of collecting and saving data for people.

Challenges

The challenges we faced while working on the project, how to deal with the GUI and how to arrange the inputs so that they come out to us in an orderly manner without any error, and dealing with errors, and modifying the codes so that they give us an appropriate exit without any problems.

Lessons learned

In general We learned from this project how to deal with GUI, and also how to show windows, and how to link them in databases.

The contribution of each student

KHALID ALRUWAYTI

first tab:
    Year of Birth (4 digits, must be above 1900 and less than 2003)
    Type of Vaccine (Pfizer, AstraZeneca, Moderna, J&J)
    Date & Time (in this format 12/10/2021 10:30 AM)
    Phone number (in this format 05XXXXXXXX)
    a submit button: when it is clicked, the system sends
     this information to the central database.
    Input validation mechanism
all the second tab
the third tab:
    import button

AHMED OMAR BABLAIL

first tab:
    First Name, Last Name
    Sex (Male or Female)
    ID number (10 digits)
    a submit button: when it is clicked, the system sends this
     information to the central database.
    Input validation mechanism
all the second tab
the third tab:
    Export button

Some screenshots of the GUI
